Transforming SiTime.com

Intelligent Experience Platform

From Static to Strategic

Agenda

01 Our Understanding of Your Vison

02 Business Impact & KPIs

03 Composable SiTime Digital Experience Solution

04 Implementation approach

05 Critical Success Factors

06 Why LTTS

Understanding Your Vision

Transform the Digital Experience: Redesign the platform into an interactive, role-based ecosystem that delivers personalized journeys for engineers, procurement, and partners.

Enable Comprehensive Self-Service: Reduce sales friction by deploying advanced parametric search, calculators, and cross-reference tools that empower users to self-discover and quote.

Integrate Core Business Systems: eliminate data silos by creating a seamless mesh between Salesforce, Marketo, ERP, and the web experience

Optimize Lead Generation: Mature the marketing automation capability to improve lead scoring, routing, and MQL/SQL conversion rates.

Build a Future-Ready Platform: Architect an API-first, modular solution that is secure, compliant, and ready for future AI/PIM/DAM extensibility.

Business Impact & KPIs Goals

70%

Self-Service Adoption

Engineers independently discover, configure, and quote products without sales intervention

25%

Design-In Conversion

Increase from parametric search to sample request through frictionless experience

18%

Sales Cycle Reduction

Accelerate time from initial contact to purchase order through automation

40%

Lead Quality Improvement

Better MQL-to-SQL conversion through intelligent scoring and routing

Our solution directly addresses your strategic objectives while building foundation for continuous innovation and growth.

Current State Challenges

Infrastructure Friction

A self-hosted Drupal environment creates a maintenance burden, consuming engineering cycles on patching and security rather than innovation. High TCO diverts resources from strategic initiatives.

Scalability Constraints

Web-centric monolithic architecture limits ability to adapt. Lacks API-first elasticity needed for future mobile apps and distributor syndication.

Data Fragmentation

Critical product and customer data trapped in disconnected silos across ERP, Salesforce,6Sense, and Marketo. Manual reconciliation slows new product launches and limits agility.

Time-to-Value Gap

Without unified "Golden Record," launching AI-driven features becomes exponentially slower and more complex, delaying competitive advantage.

Composable SiTime Digital Experience Solution

01 Infrastructure Bedrock

Migrate to Acquia Cloud Platform (PaaS) for 99.99% availability. Consolidate Edge Security, CDN, and CI/CD into unified platform, eliminating tool sprawl.

02 Data Fabric

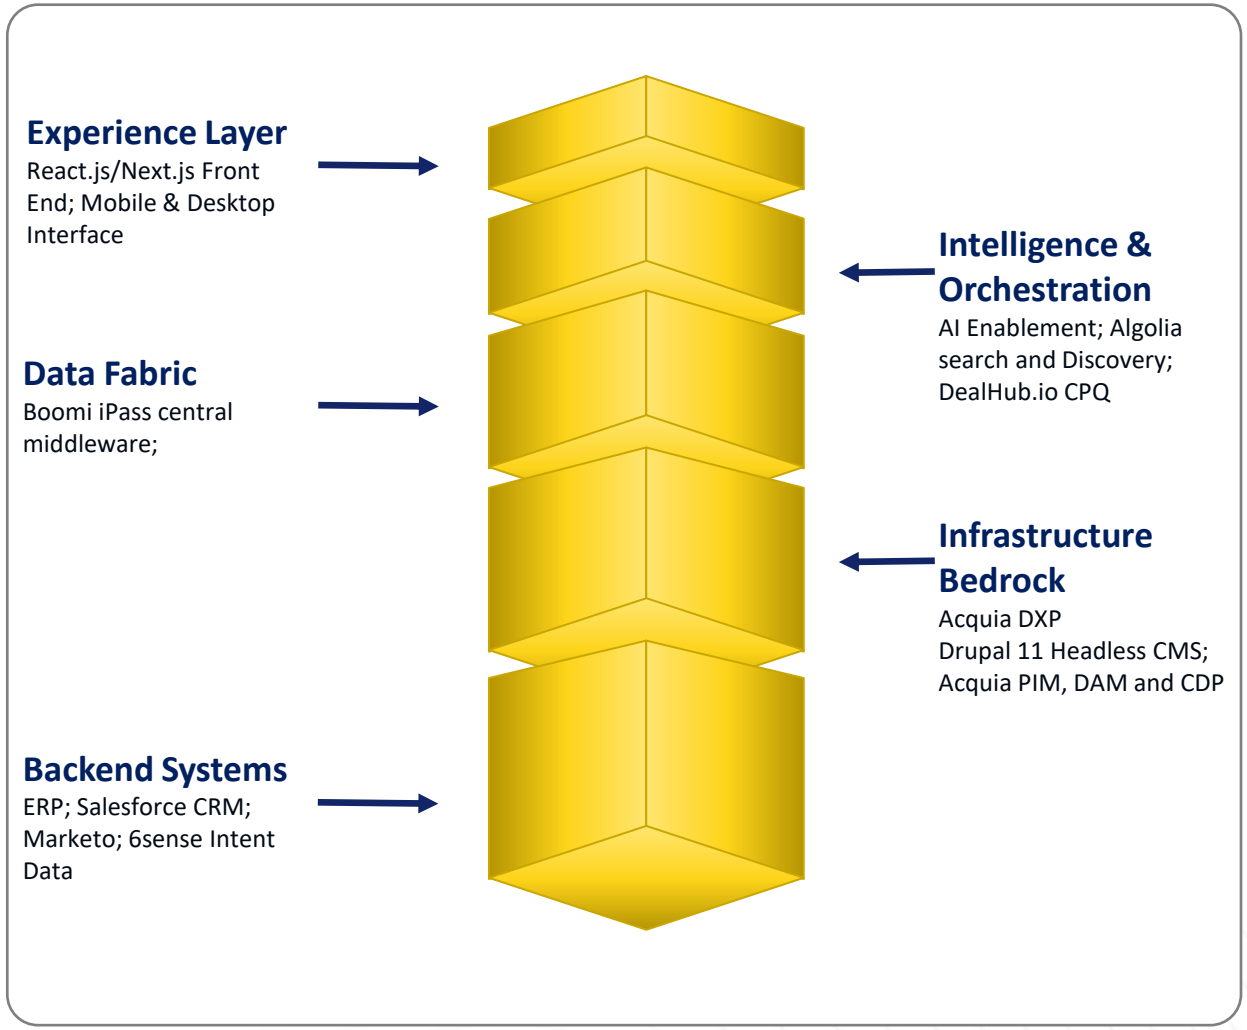
Implement Acquia PIM, DAM and CDP to create "Golden Record" across product and customer content and data. Enable AI-ready data pipeline for intelligent search and personalization.

03 AI Intelligence Layer

Deploy **Algolia** Search and Discovery Platform along with **DealHub** CPQ. Progress from predictive analytics to generative AI concierge to autonomous agentic workflows.

04 Experience Layer

Build headless next.js web and Native mobile app. Deliver role-based journeys optimized for engineers and procurement teams.



Infrastructure Bedrock : Why Acquia DXP Wins for SiTime

Operational Independence for Marketing (Speed to Market)

The Challenge: Currently, Marketing relies on IT for page builds, slowing campaign velocity.

The Solution: Acquia Site Studio. This low-code "experience builder" empowers your marketing team to create landing pages and modify layouts using a visual drag-and-drop canvas. IT builds the *Design System* (atoms and molecules) once; Marketing builds *Pages* infinitely.

Proof Point: Acquia customers typically see a **49% improvement** in time-to-market for new content.

Reduced IT Overhead & Risk (The "Zero-Ops" Cloud)

The Challenge: Your current self-hosted Drupal instance on GCP places the burden of patching, scaling, and security entirely on your limited internal team.

The Solution: Acquia Cloud Platform (PaaS). We move you to a fully managed, Kubernetes-based container architecture that auto-scales during traffic spikes and self-heals.

Proof Point: Organizations report a **34% reduction in compliance certification costs** and a **15% reduction in downtime** by shifting to Acquia's managed PaaS.

Unified Product & Asset Truth (The Engineering Backbone)

The Challenge: Engineering data (specs) and Marketing data (benefits) are siloed, making parametric search difficult to manage.

The Solution: Acquia PIM & DAM (Widen). We implement a dedicated **Product Information Management (PIM)** layer to merge "Hard Specs" with "Soft Content" from marketing. This ensures that the moment a frequency spec changes in the ERP, it propagates to the datasheet and searches automatically.

Value: A single source of truth for the **250+ active SKUs** and **1,000+ technical documents**, governed by strict version control.

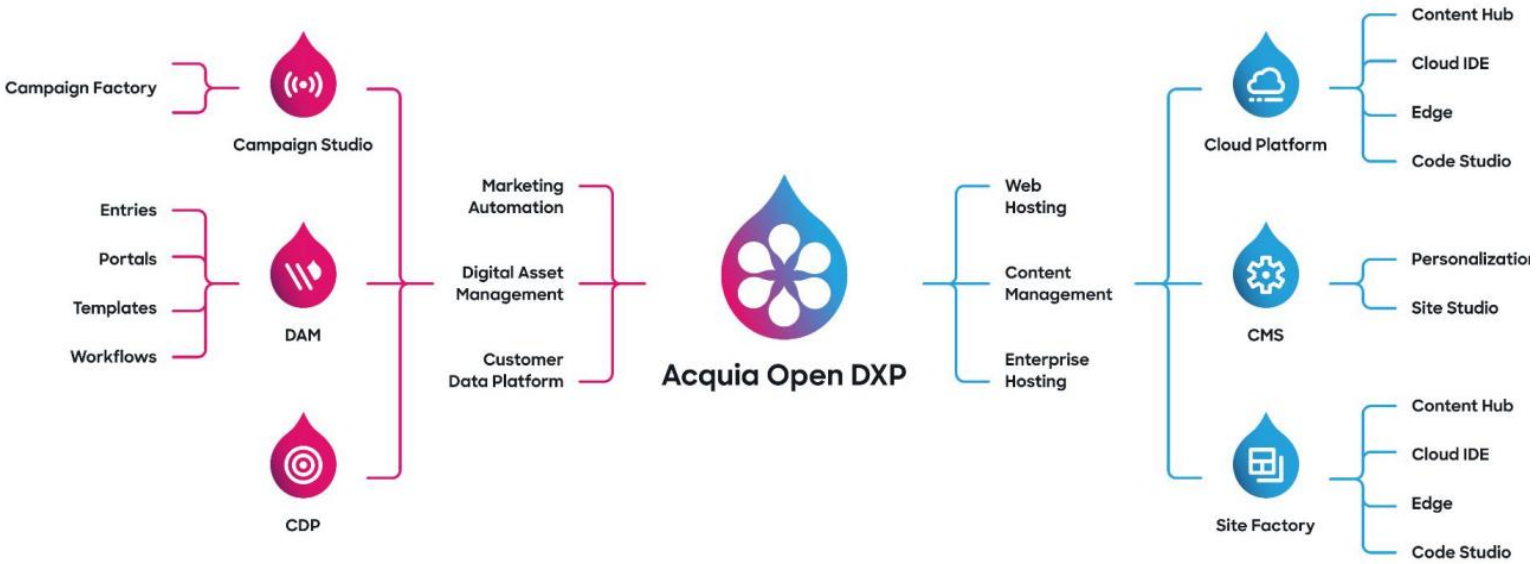
Closed-Loop Revenue Intelligence (The "Golden Record")

The Challenge: You cannot currently see how a web search for "Oscillators" translates into a sample order at a Distributor.

The Solution: Acquia CDP (Customer Data Platform). This is the "Brain" of the stack. It ingests data from **Salesforce**, **Marketo**, Website (GA4)**, 6sense,** and **Distributor POS Logs** to create a 360° view of every customer/prospect user persona (Engineer, Buyer, FAE)

Value: It enables **Identity Resolution**, stitching anonymous web visitors to known CRM profiles, allowing you to personalize the experience based on *intent* rather than just *clicks.*

Acquia Key Features and Strategic Value to SiTime



Component	Role in SiTime Architecture	Strategic Value
Acquia Cloud Platform	**Core Infrastructure**	**Security & Scale.** Provides the Drupal 11 runtime, Varnish caching, and 99.95% Uptime SLA. It removes the "keeping the lights on" burden from your IT team.
Acquia CMS (Headless)	**Content Hub**	**Hybrid Flexibility.** configured as a "Hybrid Headless" system. It serves JSON:API content to the **React Front-End** for the "App-like" experience while allowing Marketing to use **Site Studio** for rapid landing page assembly.
Acquia PIM (Widen)	**Product Master**	**Data Integrity.** The central repository for all engineering specifications. It validates data types (e.g., ensuring "Frequency" is numeric) before pushing to the website.
Acquia DAM	**Asset Master**	**Brand Consistency.** Centralizes datasheets, CAD files, and product images. It ensures the correct version of a datasheet is served globally via CDN.
Acquia CDP	**Customer Brain**	**Revenue Attribution.** Unifies data from Marketo, Salesforce, and 6sense to drive the "Pathfinder" personalization engine.
Acquia Edge	**Global Delivery**	**Performance.** A fully managed CDN and Web Application Firewall (WAF) that ensures sub-second load times for engineers in Asia and Europe.

12-Month Phased Roadmap

The 4-Release Execution Strategy

R1: Lift & Shift (M3)

Migrate Drupal 10 from GCP to Acquia Cloud PaaS (Drupal 11). Sr. Drupal Cloud Engineer executes platform configuration including Edge, Varnish, and security hardening to ensure zero-downtime stability.

R2: Activate Data Fabric (M6)

Ingest ERP and Salesforce data, activate Acquia PIM, DAM, and CDP. Deploy Boomi iPaaS (Complex Flows) + Acquia Native Connectors (Standards).

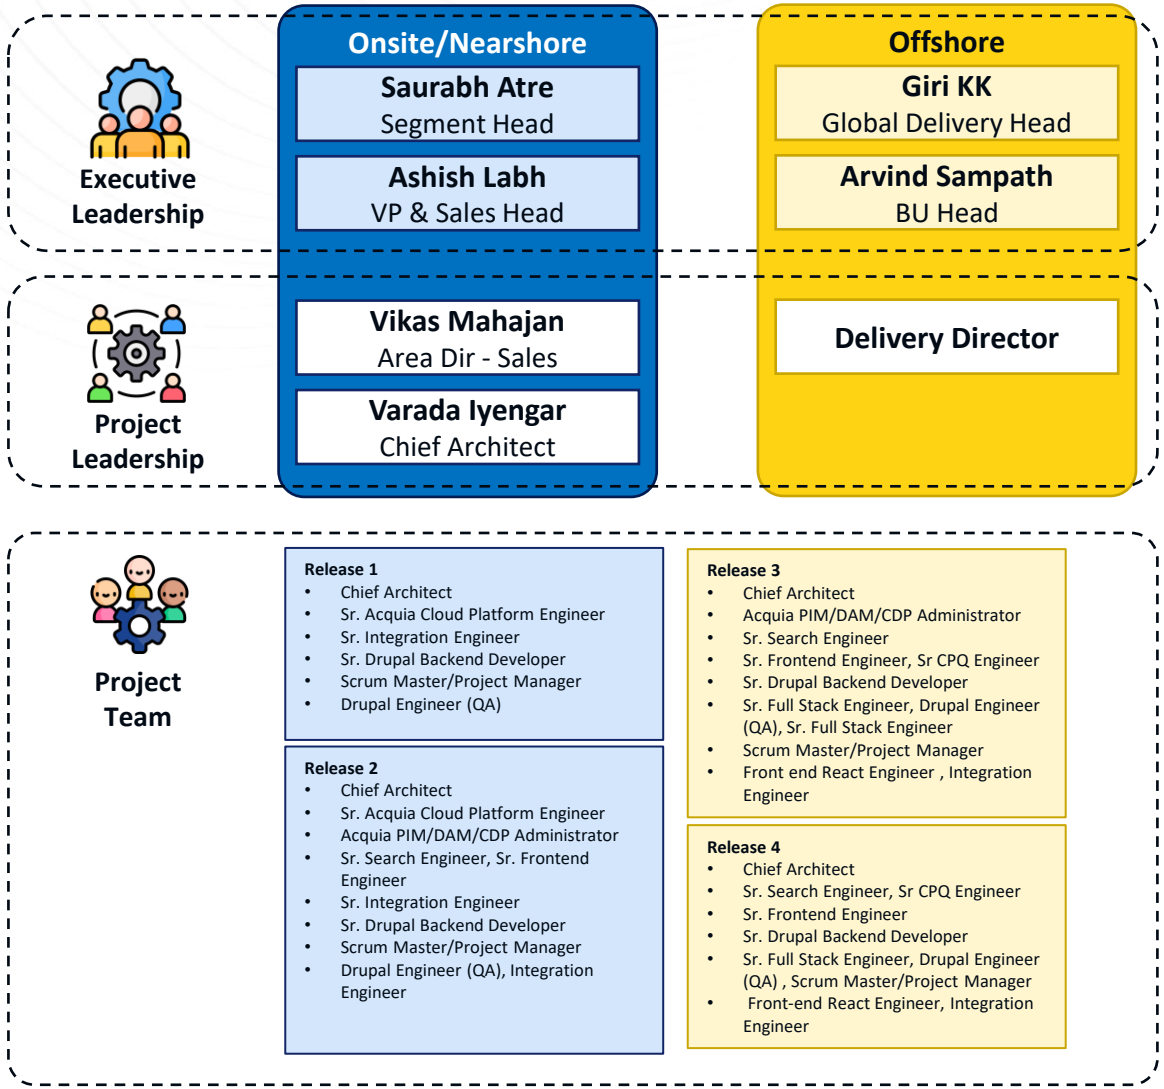
R3: Activate Intelligence & Search (M9)

Build search index, configure NeuralSearch, and optimize relevancy tuning. Utilize the Acquia-Algolia Accelerator (pre-built IP) to eliminate 8 weeks of custom integration work.

R4: Experience Transformation (UX, Web, & Mobile) (M12)

Deploy React.js front-end with DealHub Configurator and execute go-live. AI-generated component libraries create the "Apple-like" UI with headless integration to DealHub.

Team Structure & Key Personnel



Role	Time zone	Working hours
Chief Architect	PST	PST hours
Sr Acquia Cloud Platform Engineer	Nearshore	PST hours
Sr Integration Engineer	Nearshore	PST hours
Acquia PIM/DAM/CDP Administrator	Nearshore	PST hours
Sr Search Engineer	Nearshore	PST hours
Sr Full Stack Engineer	Nearshore	PST hours
Sr Front End Engineer	Nearshore	PST hours
Sr CPQ Solution Engineer	Nearshore	PST hours
Sr Drupal Backend Engineer	IST	Overlap with PST hours when required
Drupal Engineer (QA)	IST	Overlap with PST hours when required
Integration Engineer	IST	Overlap with PST hours when required
Search Engineer (Algolia)	IST	Overlap with PST hours when required
Front-End React Engineer	IST	Overlap with PST hours when required
Sr Front End Engineer	IST	Overlap with PST hours when required
Scrum Master	IST	Overlap with PST hours when required

Critical Success Factors

Key Assumptions

- Timely access to Salesforce, Marketo, Oracle ERP systems and APIs
- No change to Commerce engine - Continue to leverage BigCommerce
- Clean, structured product data available for migration
- Distributor API cooperation (Mouser, Digi-Key, Arrow)
- Stakeholder availability for timely decisions and approvals
- Scope stability with controlled change management

SiTime Requirements

- Dedicated project sponsor and core team engagement
- Content review and cleansing support from product/marketing teams
- Legal/compliance approvals for privacy and data usage
- IT coordination for system access and integrations
- Budget commitment for full 12-month transformation
- Acquire Licenses for Acquia, Algolia and Dealhub

Risk Mitigation

- Phased delivery minimizes "big bang" risk
- Parallel development tracks accelerate timeline
- Structured knowledge transfer ensures continuity
- Comprehensive testing at each release gate
- Dedicated team with semiconductor domain expertise

Professional Fees

Platform Implementation Fees

	Release 1	Release 2	Release 3	Release 4
Description Of Each Release	Lift and Shift: Focus: Migrate Drupal 10 to Acquia Cloud CMS (Drupal 11)	Data Fabric: Focus: Establish the Integration and Data flow for the transformation	Intelligence Layer: Focus: Unified Search and AI Tuning	Experience Layer: New Web and Mobile Experience
Duration Of Each Release	3 months	3 months	3 months	3 months
Fees of Each Release	$ 135K	$ 190K	$ 280K	$ 270K
Total Fees	**$ 875K**			
	Cost of licensing from different vendors will be determined after due diligence. This is outside the provided cost.			

Ongoing Fees

	Year 1	Year 2
Key activities and description	Bug Fixes & Issue Resolution, Infrastructure Tuning, Monitoring & Incident Management, Security Hardening, User Feedback Integration, UI/UX Improvements, User Training Year one is resource-intensive because we are not just maintaining the system—we are actively stabilizing it and adapting it to real-user needs.	Year two marks the transition from stabilization to optimization with predictable enhancements, mature platform and experienced team. Which is why costs drop as compared to year one.
Fees	**$340K**	**$280K**
Cost of annual licensing of tools finalized during implementation will be determined at the time of vendor negotiations. This is outside of the cost provided.		

Why LTTS

Top 3 Global Pure-play AI, Digital, ER&D Consulting Services Company

Deep domain expertise in the Semiconductor Industry.

Digital Enterprise Platform expertise and partnership.

Leverage existing relationships and knowledge of SiTime systems and processes to ensure program success

Global Delivery model ensuring scalability, quality, SLA driven , robust methodologies and framework

Ready team To start on the engagement

L&T Technology Services

200+ Global Clients #

23,670 Employees

25+ Countries

$1.35 Bn Q2FY26 Annualised Revenue

57 Of Global 100 R&D Spenders as clients

1,601 Patents

105 R&D Innovation Labs

23 Global Design Centers

90%+ Repeat Biz.

SERVICES & SOLUTIONS ACROSS...

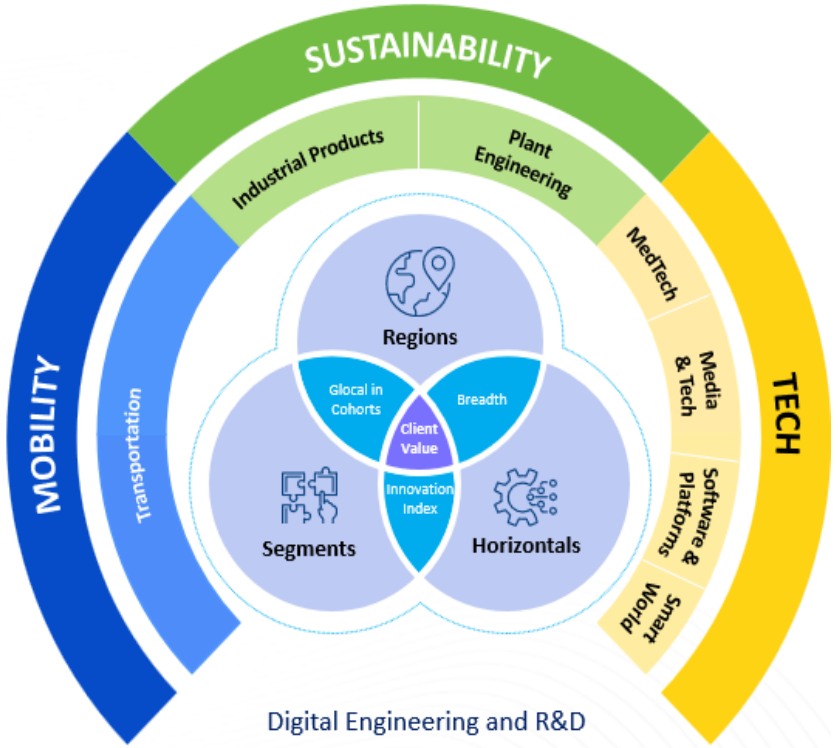
BUSINESS SEGMENTS



Technology Areas ▶ Digital Products & Manufacturing Services | Embedded Systems

Multi-domain & multi-vertical expertise | **State-of-the-art innovation labs** | **Creator of many world's 1st products & solutions** | **Best workplace for Engineer at Heart** ♥ | **Engineering Idea to Reality (I2R)**

with revenue over $1M

LTTS engaged in collaboration with MIT Media Lab, Boston

Access to Cutting-Edge Research

Exclusive access to research, patents, and materials

Collaborative Opportunities

Potential engagement in research projects, create shadow teams, and host workshops

Event Access & Networking

Access to lectures, events and innovators at member meetings

Fall Member Event, Oct 21 '25
Latest six months of research

Exclusive Perks

Co-host events, access startups and funds, lab-wide access

Research Projects Summary

Personal Robots

Bridges the gap between intelligent personified technologies and human collaborative behavior

Tangible Media

Seamlessly couple the dual world of bits and atoms by giving dynamic physical form to digital information and computation.

Multisensory Intelligence

Creating human-AI symbiosis across scales and sensory mediums to enhance productivity, creativity, and wellbeing

Signal Kinetics

Inventing, building, and deploying **wireless sensor technologies** to address complex problems in society, industry, and ecology

City Science

New strategies to create places where people live and work in addition to the mobility systems that connect them to meet the profound challenges of the future.

Biomechatronics

Advanced technologies that merge body and machine, mimicking musculoskeletal design, muscle-like actuators, and biologically inspired control methods.

The LTTS AI Nucleus - From Core Principles to Proven Market Impact

CLIENT PROGRAMS

70+ Production Programs

Tyre Design (Japanese Tier-1)
25-30% reduction in design time

API Development (NA Telco)
60% productivity improvement

DFMEA (French Tier-1)
25-30% time reduction in creation

PROCESS IMPROVEMENT

60%+
Projects optimized leveraging AI

1900+
Artifacts for AI-Driven Delivery Model

50+
In-house tools for scalable, successful AI-enabled delivery

70%+
Employees on AI-enabled managed services projects

Long-term partnerships – EDA Tool Vendors, Contract Manufacturers

Case Studies :

UX Research & Design for a Global HiTech Leader

Project Overview:	
A global technology leader aimed to enhance the user experience and design consistency across its Platforms Mapping Portal. The objective was to conduct comprehensive UX research and deliver intuitive UX design solutions that streamline navigation, improve accessibility, and support diverse user needs. This initiative focused on creating a modern, user-centric interface that aligns with design principles, ensuring seamless interaction and engagement for users worldwide.	
CHALLENGES:	• Lack of a single source of truth across systems created data silos, reducing accuracy and consistency. • Lack of a platform providing insights on quota attainment, revenue, etc. • Manual processes and a lack of advanced alerts lead to inefficiencies and missed opportunities.
SOLUTIONS:	• Understand user journeys as Sales (e.g., Partner managers) manage, re-map, and report out on Partner data. (Persona interview, Persona interviews, user flows) • Identify product opportunities during the journeys. • Validate prioritized product requirements based on the learnings. • Inform product/design strategy and planning across multiple Platforms Sales Tools workstream. • Synthesized data to map out user flows and conceptualize features, later translated into interactive prototypes
RESULTS & OUTCOMES:	• Post Interviews we created research presentations, affinity mapping, user scenarios/user flows, wireframes, prototype samples etc. • Shared insights, strategies, and workarounds to address data discrepancies and navigate the complexities of partner mapping. • Enhanced visibility and collaboration with a proactive approach
RELEVANCE TO SITIME:	• Conducted deep persona research (sales managers, partner managers) to inform design decisions—mirroring SiTime's need for intuitive navigation for engineers and procurement teams. • Designed solutions for multi-platform environments similar to SiTime's semiconductor partner and distributor networks, ensuring seamless data visibility and quota tracking.

CMS Implementation for a Leading Technology Company

Project Overview:	
Migrated a global tech company's website to AEM, enabling faster content publishing, localization, and seamless integrations. Delivered a scalable, high-performance CMS with advanced search and real-time catalog updates.	
CHALLENGES:	• Migration from a legacy CMS to Adobe Experience Manager (AEM) while maintaining business continuity. • Need for a secure, high-performance CMS optimized for desktop, mobile, and tablet platforms. • Integration requirements for: Adobe Analytics & Adobe Target Translation systems, Backend catalog Solr search engine • Requirement to roll out localized content across multiple countries with translation and disaster recovery (DR) support.
SOLUTIONS:	• Developed reusable components, templates, and experience fragments in AEM to simplify content authoring. • Implemented a clustered authoring and publishing environment for scalability and performance. • Auto-replication of modified assets, references, and experience fragments. • Preview in staging before production deployment. • Approval-based publishing workflow. • Enabled auditing and tracking of replication activities between staging and production. • Seamless integration with translation vendors for locale-specific content rollout
RESULTS & OUTCOMES:	• Faster content publishing with reduced authoring effort. • Improved scalability and performance, ensuring high availability and responsiveness. • Enhanced search experience via Solr integration replacing basic search. • Streamlined translation workflows with approved vendors. • Real-time catalog integration for dynamic content updates.
RELEVANCE TO SITIME:	• Solr-powered search and real-time catalog updates enable engineers to filter by technical parameters (frequency, jitter, temperature range), improving product discoverability and user experience. • Building reusable components ensures fast publishing of datasheets, application notes, and product updates, which is critical for SiTime's B2B marketing. • Seamless integration with translation vendors supports multi-language rollout, essential for SiTime's global customer base and compliance in key markets.
